SILKOXY
SILICONE

GAME-CHANGING SILICONE

Everest Systems high solids Silkoxy silicone is formulated by chemists with decades of experience in the roofing industry.

Professional contractors asked for certain qualities and Everest listened, creating a best in class formulation that stands alone in its ease of application and long term performance.

Contractors are consistently impressed by its unique qualities.

WHY SILICONE IS BETTER

Made from one of the most abundant resources on the planet, silicone begins as silicon dioxide, also known as sand. From there an ore called silicon is extracted, and after a very specific reaction takes place, silicone polymer is produced.

Silicone polymer is unique in the roofing world as it is inorganic and is unaffected by UV degradation. Every other roofing material in use eventually succumbs to the effects of UV rays. Over time they become brittle, warped and ultimately, they fail.

TIMELESS WEATHERPROOFING

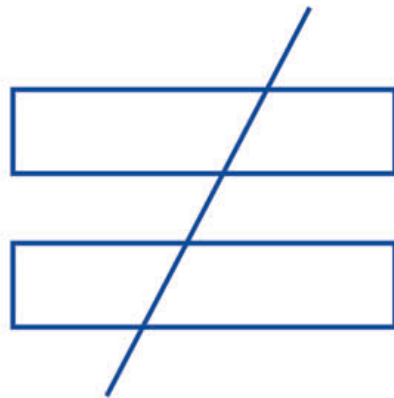

Because silicone is inorganic it remains as flexible and strong even after many years of exposure to the elements. This means that while other materials break down, silicone will remain intact, protecting your investment for years to come.

Silicone was first invented in 1938 and its uses span many industries. The roofing industry has benefitted from a timeless weatherproofing material that resists the effects of age and is unaffected by ponding water conditions.

NOT ALL SILICONE COATINGS ARE CREATED EQUAL

While most competitors in the roofing industry base their formulations on “Oxime” chemistry, Everest brand Silkoxy Silicone is “Alkoxy” based chemistry.

Alkoxy silicone has many benefits over its competition. One of the first things that one notices about “Oxime” silicones is their noxious smell.

When applying restoration products on or around schools, hospitals, government buildings, or any other buildings where fumes are a concern, “Oxime” silicones will easily be noticed by those inside.

Silkoxy silicone is low odor and may be used in sensitive areas without concern.

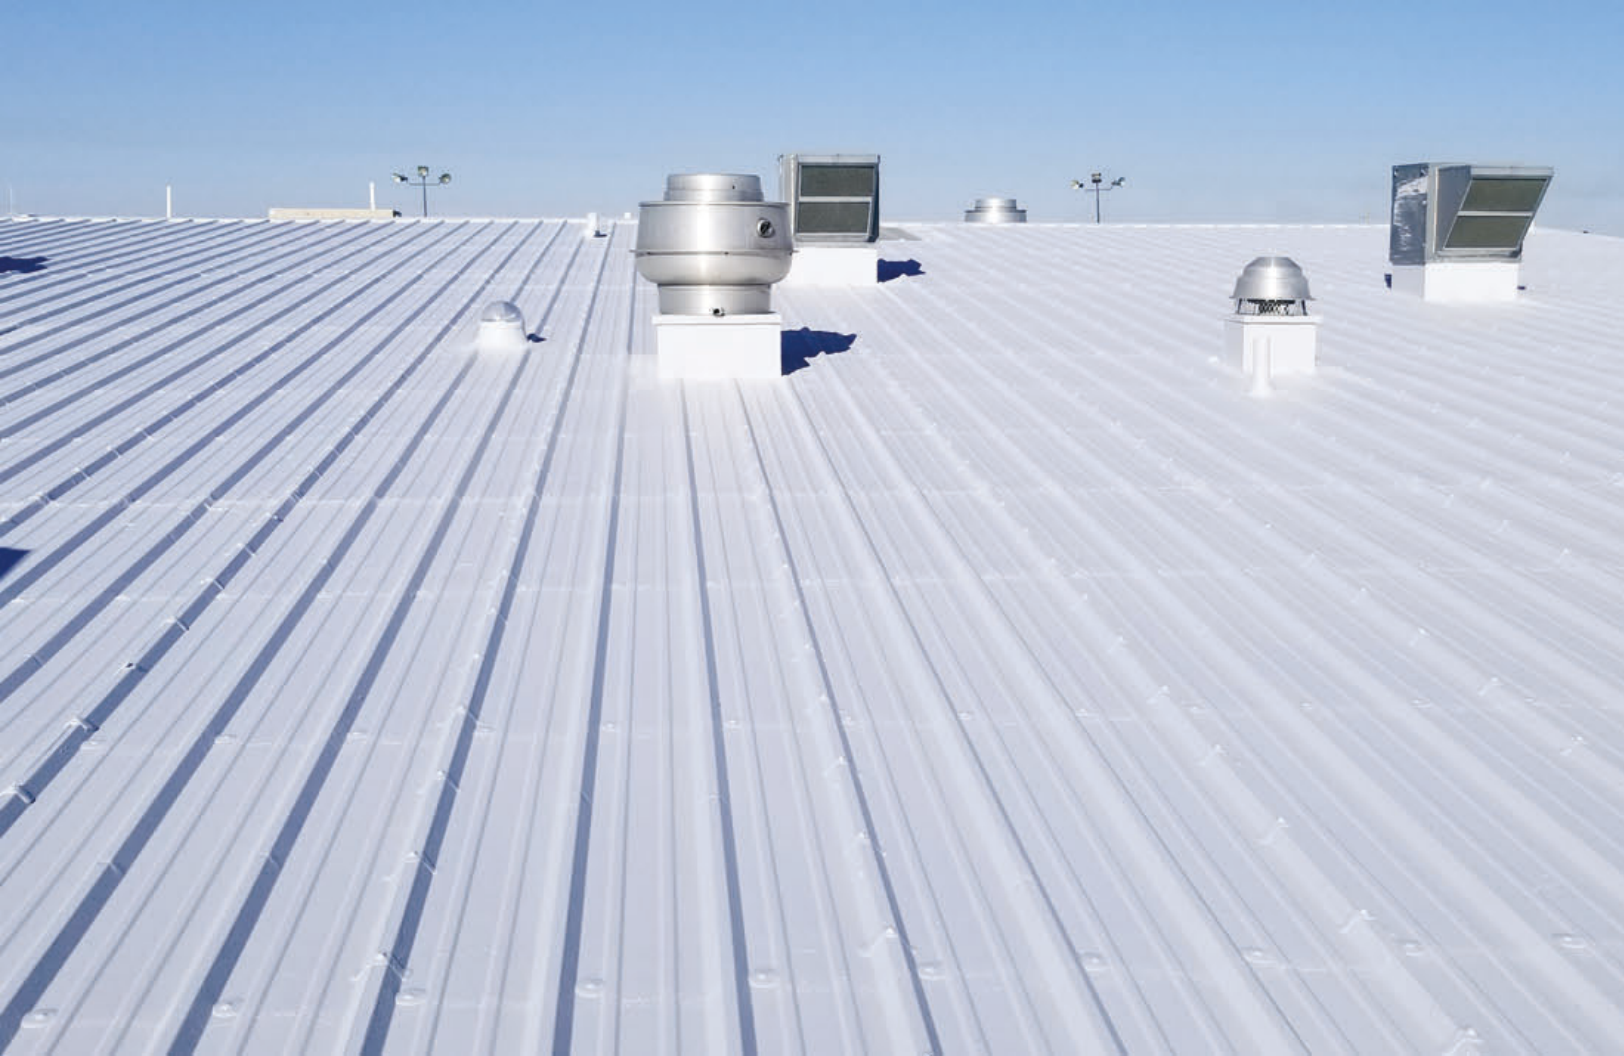

A WORTH WHILE INVESTMENT

In terms of product performance Everest Silkoxy stands alone. Silkoxy surpasses its' competition with superior elongation, tensile strength, hiding power, reflectivity and vertical hang.

We are so confident in Silkoxy that we do not exclude ponding water in our warranties.

A customer may safely choose 10, 15 or 20 years of protection, and can rest assured that their investment has been money well spent.

BEST IN CLASS AT A COMPETITIVE PRICE

With all of the choices of roofing restoration products, it is the goal of Everest Systems to make the right decision an easy one. Everest Silkoxy is best in class at a competitive price. Its qualities were developed with decades of roofing experience.

Join the many other successful projects and choose Everest Systems Silkoxy for your roof restoration. Why waste your money?

Restore your roofing with Everest Silkoxy Silicone!

PROJECT PROFILE

SUNNYVALE TECH COMPANY

SIZE 70,000 Sq. Ft.

LOCATION Sunnyvale, CA

DATE October 2013

CHALLENGE Failing and dirty PVC Roof

- Constant Leaks
- Dirty unsightly appearance due to plasticizer migration from PVC membrane
- Accelerating degradation of PVC membrane
- High occupancy building

SOLUTION

- Make seams, perimeter and penetrations watertight
- No costly and risky tear-off and business disruptions
- Added improved reflectivity and energy efficiency
- Watertight sustainable roofing system

THE NEW INDUSTRY LEADER.

16601 Central Green Blvd.,
Suite 100,
Houston, TX 77032
